

High Thrust Air Cylinder

# PNEUMATIC POWER CYLINDER

Generates high thrust of 20 tons or more only with air pressure.  
The special mechanism allows for high speed operation.

**HIROTA MFG. CO.,LTD.**

## Overview

The pneumatic power cylinder is a compact all-in-one unit that combines a hydraulic cylinder with the popular pneumatic booster developed by HIROTAKA SEIKI. The long stroke cylinder delivers high thrust and high speed performance for hydraulic operations. In addition to the standard model, the product line has been expanded with the introduction of a compact miniature series. Other models are available with switches, for easy output of motion signals, and with stop valves for emergency stop and inching motion. Devices such as press-fitting, clinching, cutting, crimping, bending, marking, punching, and clamping can be constructed with a simple pneumatic circuit.

## Feature

- ① Generates high thrust of 1 to 40 tons via only air pressure.
- ② The stroke can be lengthened. (100 mm or more)
- ③ Special mechanism allows for high speed operation. (200 mm at 0.5 seconds or less)
- ④ Simple mechanism ensures trouble-free operation.
- ⑤ Controllable by pneumatic valve alone.
- ⑥ Delivers variable thrust by means of modifying the air pressure.
- ⑦ Available with auto switch.  
(Symbol : PCMW, PCSW, PCHW)

Standard products allow for position detection using a timer, limit switch or other device. Models with switches deliver easy position detection by installing auto switch to the hydraulic cylinder.

- ⑧ Available with operating valve.  
(Symbol : PCMV※, PCSV※, PCHV※)  
Includes two valves to reduce piping labor. The user simply provides piping to the pressure source.
- ⑨ Available with operating valve and auto switch.  
(Symbol : PCMV※W, PCSV※W, PCHV※W)  
Includes operation valve and auto switch for optimum ease of use.
- ⑩ The operating valved models can be installed sandwich regulator for adjustment of the high thrust only, drop prevention valve for supply air disappears.
- ⑪ Available with stop valve. (Symbol : V※)  
Performs emergency stop and inching motion.  
(Usable only for long stroke motion during die replacement, and for high thrust during working operation.)

## Mechanisms and Action description

## Range of standard products

Table 1 All model are Rod side flange type.

( "Circle mark" indicates standard products. "Triangle mark" indicates semi-standard products.

	PCH-06	0	36	72	108
	PCH-13	0	25	65	105
	PCH-17	10	60	110	160

### Note

- The total stroke includes the pneumatic thrust stroke and the high thrust stroke.
- High thrust stroke can be switched anywhere in the total stroke.  
( Refer to circuit on page 14, 15 )  
However, for the types shown in Table 2, switch the pneumatic thrust stroke to high thrust stroke after operating each valve or more from the piston rod retracted position.  
( To secure the high thrust stroke )  
PCH-35-1020 70 mm  
PCH-35-1520 20 mm  
PCH-44-1015 50 mm  
PCH-44-1520 125 mm  
PCH-44-2020 75 mm  
or more, operate the stroke.
- For other special stroke, consult with our distributor. The total stroke can be special ordered up to 500 mm. The high thrust stroke can be special ordered up to 30 mm.
- Refer to the table in the dimensions for the semi-standard products because the total length dimensions are different from the standard products. ( Page 6 to 10 )

Fluid	Air											
Proof pressure	1.5 MPa											
Operating pressure	Pneumatic thrust stroke: 0.3 to 0.7 MPa, High thrust stroke: 0.1 to 0.7 MPa											
※ Piston speed mm/s	Rapid feed	300	300	300	300	280	280	280	200	200	150	150
	High thrust feed	30	29	27	27	25	22	20	16	13	10	8

※ The piston speed is based on 0.5 Mpa, no load, under moving forward.

※ The hydraulic fluid must be a standard mineral hydraulic fluid from any manufacturer. (ISO VG22 or VG32)

※ Guides must be installed, similar to normal hydraulic cylinders.

※ The construction of the air hydro cylinder can generate a slight sliding leakage that is unavoidable under operation. The leaked hydraulic fluid can be discharged to the outside from P3, P4 port. The installation of a mist separator or similar.  
(See the oil film removal specification product shown on page 13.)

## Air consumption volume

Unit : L										
Maximum thrust	Model No.	Total stroke					High thrust stroke			
		50mm	100mm	150mm	200mm	300mm	5mm	10mm	15mm	20mm

1t	PCM-01	1.3	2.0	2.6	3.3	4.6	1.6	2.5	3.4	4.4
2t	PCS-02	1.8	2.8	3.8	5.3	7.3	4.9	6.7	8.5	10.3
4t	PCS-04	1.8	2.8	3.8	5.3	7.3	6.8	10.5	14.1	17.8
3t	PCH-03	4.7	7.3	9.9	12.6	17.8	8.8	11.5	14.3	17.1
6t	PCH-06	4.7	7.3	9.9	12.6	17.8	11.7	16.8	21.9	27.0
8t	PCH-08	4.7	7.3	9.9	12.6	17.8	16.7	24.5	32.4	40.2
13t	PCH-13	10.7	17.1	23.6	30.0	42.9	28.4	40.1	51.8	63.5
17t	PCH-17	10.7	17.1	23.6	30.0	42.9	34.4	49.2	63.9	78.6
24t	PCH-24	10.7	17.1	23.6	30.0	42.9	40.6	61.4	82.1	103.0
35t	PCH-35	15.2	23.8	32.4	41.0	58.2	58.5	88.1	118.0	148.0
44t	PCH-44	15.2	23.8	32.4	41.0	58.2	68.5	106.0	143.0	180.0

Note)

These values represent the theoretical air consumption volume for one reciprocating stroke using an air pressure of 0.5 MPa, then converted to the atmospheric pressure.

Example)

For the air consumption volume of PCH-03-1005 under the above conditions.

Model No. : PCH-03

Total stroke 100mm : 7.3L

High thrust stroke 5mm : 8.8L

Therefore, the total air consumption volume for one reciprocating stroke is as follows : 7.3L + 8.8L = 16.1L

## Thrust table

Unit : N ( Theoretical value )														
		Model	Miniature type				Standard type

		0.3	2,350	4,800	9,420	18,180	14,720	26,170	37,690	58,900	74,550	103,180	148,580	190,850
		0.4	3,140	6,410	12,560	24,240	19,630	34,900	50,260	78,530	99,400	137,580	198,110	254,460
		0.5	3,920	8,010	15,700	30,300	24,540	43,630	62,830	98,170	124,250	171,970	247,640	318,080
		0.6	4,710	9,610	18,840	36,360	29,450	52,350	75,390	117,800	149,100	206,370	297,170	381,700
		0.7	5,490	11,210	21,990	42,420	34,360	61,080	87,960	137,440	173,950	240,760	346,700	445,320

Note 1) The weight of jig or mold during vertical operation should be 50% or less of the backward thrust value to obtain stable operation and speed.

Note 2) High thrust should be 70% or less of the high thrust value to obtain stable operation and speed.

Note 3) For oil film removal specification for rod, subtract 70 from the thrust value in the table.

## How to order

**PCS V1 W - 02 - 05 05 - 3 - H2ME - V1 - B - RT - G - S2**

Symbol	Series
PCM	Miniature type
PCS	
PCH	Standard type

Symbol	Operating valve
Nil	Without valve
V1	With 100 VAC
V2	With 200 VAC
V3	With 24 VDC

Type of PCH-35 and 44 are without valve only.

Symbol	With auto switch (Built-in magnet)
Nil	Without magnet
W	Magnet sensing

Symbol	Maximum thrust (at 0.7 MPa)
PCM	
005	0.5 ton
01	1 ton
PCS	
02	2 ton
04	4 ton
PCH	
03	3 ton
06	6 ton
08	8 ton
13	13 ton
17	17 ton
24	24 ton
35	35 ton
44	44 ton

Symbol	Total stroke
05	50 mm
10	100 mm
15	150 mm
20	200 mm
30	300 mm

Symbol	High thrust stroke
05	5 mm
10	10 mm
15	15 mm
20	20 mm

Symbol	Number of Auto switches
1	1 pc.
2	2 pcs.
3	3 pcs.
N	"N" pcs.

Symbol	Oil film removal specification for rod
Nil	Without measures
B	With measures

Symbol	Stop valve
Nil	Without stop valve
V1	With 100 VAC
V2	With 200 VAC
V3	With 24 VDC

Symbol	Auto switch
Nil	Read auto switch
H2ME	Solid state auto switch

Symbol	Regulator for high thrust
Nil	Without regulator
R	With regulator

Selectable only with operating valve. All PCM series can be selected.

Symbol	Speed controller
S2	High thrust feed speed
S3	Backward drive speed
S4	Pneumatic thrust feed speed

Selectable only with operating valve. Multiple selections possible. Example : S234

Symbol	Oil pressure gauge
Nil	Without pressure gauge
G	MPa indication
GX	MPa-kN indication

Hydraulic pressure sensor is also available. See the accessories.

Symbol	Drop prevention valve
Nil	Without valve
T	With valve

Selectable only with operating valve. PCM series cannot be selected.

## Selection method for product number

- Determine the type that will provide the required high thrust.  
( If the thrust of 43000N at 0.5MPa is required, look at the thrust table and decide it as PCH-08 that can produce the thrust of 62830N at 0.5MPa. )
- Next, determine the total stroke required to operation.  
( If the punch needs to be 70mm away from the work to supply and discharge the work, allow 100mm for the total stroke. )

- Determines high thrust stroke.  
( If you press-fit a bush with a height of 2 mm at 43000N, add about 50% to make it 3 mm, which is a close stroke of 5 mm. With the above, the product number is determined to be PCH-08-1005. )

## Required amount of oil

Unit : liter

Model No.	Total stroke	Required amount
PCM - 005 ~ 01	05	0.20
	10	0.30
	15	0.40
	20	0.45
	30	0.55
PCH - 03 ~ 08	10	1.00
	15	1.60
	20	1.90
	30	2.50
PCH - 13 ~ 24	10	2.70
	15	3.40
	20	4.10
	30	6.20
PCH - 35 ~ 44	10	3.80
	15	4.70
	20	5.60
	30	7.40

Model No.	Total stroke	Required amount
PCS - 02 ~ 04	05	0.35
	10	0.45
	15	0.55
	20	0.75
	30	0.95

## ◆ Hydraulic fluid

### Oil brand, product name and viscosity

Brand	Product name • Viscosity
Royal Dutch Shell	Tellus S2V 22 or 32
Exxon Mobil	DTE 22 or 24

Hydraulic fluid : Standard mineral hydraulic fluid

ISO viscosity grade : VG22 or 32

Note) Hydraulic fluid is not attached at the time of shipment.

Please prepare at your company.

However, PCM and PCS are shipped with oil enclosed.

PCM	PCMW
PCM-B	PCMW-B

Note 1) The type with speed controller is attached the same silencer with throttle valve as P1 exhaust.

Note 2) PCH-13 to 24 are supplied with the "Operating valve", "Regulator" and "Fall prevention valve" in the same package, so please assemble them by the customer.

Note) Semi-standard product full length dimensions and minimum high thrust switching position for pneumatic thrust stroke are the same as the table on page 10.

## Oil film removal specification for rod

PCM -B  
PCS -B  
PCH -B

With commonly used packing, the oil that leaks from the piston rod is not seen as "leak" due to the sliding of the hydraulic cylinder. However, when molding electronic parts or caulking, a drop of oil will result in a defective product. The rod oil film removal specification protects parts from oil by minimizing oil discharge from the sliding parts of the piston rod.

### Internal structure

As the piston slides, the oil that adheres to the inner surface of the hydraulic tube becomes a thin oil film that flows to the rod packing. The rod packing seals the air pressure, but the oil film cannot be cut completely and goes out through the rod. Before this oil goes out, the oil film is removed by the oil seal and discharged from the drain port.

## About use in the environment that hates oil

For the type with oil film removal specification for rod, only oil film measures for the piston rod are taken, so take separate oil measures for the valve exhaust port and drain port.

As shown in the illustration, the solenoid valve should be exhausted through a mist separator or similar device.  
( These drawings supplement the "Air Piping Application Examples" shown on page 12 and 13. )

Recommended product: Exhaust Cleaner  
Maker: SMC, CKD, etc

Connect to the concentrated exhaust pipe and discharge it outdoors.

### Drain port

As shown in the illustration, connect to the concentrated exhaust pipe and discharge it outdoors.

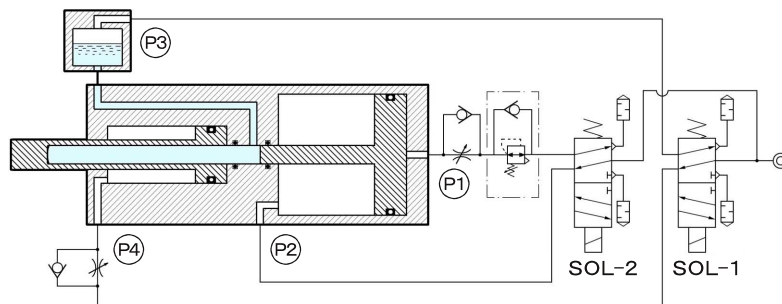

## Example for air circuit

### The type without operating valve

PCM  
PCS  
PCH

- ※ Install the regulator when adjusting high thrust in order not to reduce the backward thrust.
- ※ The speed controller (P1) should be installed in the direction shown in the illustration to prevent negative pressure in the oil.

### The type with operating valve

PCMV※  
PCSV※  
PCHV※

- ※ Install the regulator when adjusting high thrust in order not to reduce the backward thrust.  
Install the spacer type regulator.
- ※ The silencer with needle valve is attached at the position shown in the illustration to prevent negative pressure in the oil.  
The PCM type is attached to the P1.

“circle mark” indicates supply, “cross mark” indicates exhaust.

Operating condition	SOL-1	SOL-2	P1	P2	P3	P4	Progress condition
Stop	OFF	OFF	×	○	×	○	Condition of illustration
Pneumatic thrust stroke	ON	OFF	×	○	○	×	Forward at rapid speed
High thrust stroke	ON	ON	○	×	○	×	Forward at high thrust
Backward drive	OFF	OFF	×	○	×	○	Backward at rapid speed

### How to adjust the cylinder speed.

Install a meter-out type of speed controller to each port.

P2 : The speed for the high thrust stroke.

P3 : The speed for the backward drive.

P4 : The speed for the pneumatic thrust stroke.

### Measures to prevent the JIG weight from falling when the supply air pressure is cut off.

By installing a pilot check valve on the P4 port and taking in the supply air as pilot air, it is possible to prevent its own weight from falling. However, it may gradually fall over time.

Also, when releasing the residual pressure, there is a danger that it will operate unexpectedly due to its own weight dropping, so take measures such as using a safety block.

### The type with drop prevention valve

PCSV※-T PCHV※-T

- ※ The drop prevention valve is used to prevent the JIG weight from falling when the supply air pressure is cut off at the upper end of the stroke of the cylinder or at the intermediate stop position.  
However, it may gradually fall over time.  
Also, when releasing the residual pressure, there is a danger that it will operate unexpectedly due to its own weight dropping, so take measures such as using a safety block.
- ※ The silencer with needle valve is attached at the position shown in the illustration to prevent negative pressure in the oil.

## Example for air circuit

The type with stop valve

PCM····V※ PCS····V※ PCH····V※

※ Install the regulator when adjusting high thrust in order not to reduce the backward thrust.

※ The speed controller (P1) should be installed in the direction shown in the illustration to prevent negative pressure in the oil.

※ For the type with a stop valve, use a 2 position single solenoid valve. With other type of actuation such as 2 position double and 3 position closed center, the air pressure inside the cylinder may be insufficient, and emergency stop, intermediate stop may not be performed, or it may take a long time to stop.

## How to intermediate stop (Emergency stop, Inching)

“circle mark” indicates supply, “cross mark” indicates exhaust.

Operating condition	SOL-1	SOL-2	SOL-3	P1	P2	P3	P4	Progress condition
Stop	OFF	OFF	OFF	X	○	X	○	Condition of illustration
Pneumatic thrust stroke	ON	OFF	ON	X	○	○	X	Forward at rapid speed
Intermediate stop	OFF	OFF	OFF	X	○	X	○	Intermediate stop
High thrust stroke	ON	ON	ON	○	X	○	X	Forward at high thrust
Backward drive	OFF	OFF	ON	X	○	X	○	Backward at rapid speed

It does not stop during the high thrust stroke, stops after the high thrust stroke returns.

## How to continuous operation for high thrust stroke drive only

“circle mark” indicates supply, “cross mark” indicates exhaust.

Operating condition	SOL-1	SOL-2	SOL-3	P1	P2	P3	P4	Progress condition
① Stop	OFF	OFF	OFF	X	○	X	○	Condition of illustration
② Pneumatic thrust stroke	ON	OFF	ON	X	○	○	X	Advance at fast speed
③ High thrust stroke	ON	ON	ON	○	X	○	X	Advance at high thrust
④ High thrust stroke return drive	OFF	OFF	OFF	X	○	X	○	Return at (High thrust + $\alpha$ ) stroke (Note 1)
⑤ High thrust stroke	OFF	ON	OFF	○	X	X	○	Advance at ( $\alpha$ + High thrust) stroke (Note 1)
⑥ Backward drive	OFF	OFF	ON	X	○	X	○	Return at condition of illustration

(Note 1) The  $\alpha$  stroke is a stroke that returns by  $\alpha$  mm from the position at the start of high thrust stroke drive.

There is no high thrust during  $\alpha$  stroke forward. The  $\alpha$  stroke of each model is shown in the table below.

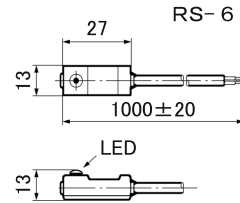

Model	$\alpha$ stroke (mm)
PCS-02-V※	about 5.5
PCS-04-V※	about 3.1
PCH-03-V※	about 2.1
PCH-06-V※	about 3.6
PCH-08-V※	about 2.8
PCH-13-V※	about 2.0
PCH-17-V※	about 1.8
PCH-24-V※	about 1.4
PCH-35-V※	about 4.5
PCH-44-V※	about 1.8

## Auto Switch

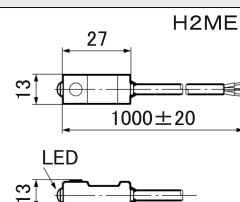

Read auto switch		
Model No.	RS-6	
Voltage	24 VDC	100 V / 200 VAC
Max. switching current	20 mA	20 mA
Max. switching capacity	5 W	5 VA
Average operating time	1 mSEC	
Insulation resistance	100 MΩ or more (500 VDC measured via megger)	
Impact resistance	30 G	
Working temperature range	-10 to 60 °C (Non-freezing)	
Lead wire	Two - core cable, 1 m	
Indicating lamp	Red LED illuminates when turned ON	

### Read auto switch

Dimintions and internal circuit	
	<p>RS- 6</p> <p>Contact protection circuit</p> <p>Brown(+) ○ — ( ) —</p> <p>Blue(-) ○ —</p>

Solid state auto switch	
Model No.	H2ME
Output type	NPN
Voltage	5, 12, 24 VDC
Max. load current	5 mA (5 VDC), 10 mA (12 VDC), 20 mA (24 VDC)
Max. switching current	100 mA (5 VDC), 200 mA (24 VDC)
Internal voltage drop	0.6 V or less (24 VDC)
Max. leakage current	0.1 mA or less (24 VDC)
Impact resistance	30 G
Working temperature range	-10 to 60 °C (Non-freezing)
Lead wire	Three - core cable, 1 m
Indicating lamp	Red LED illuminates when turned ON

### Solid state auto switch

Dimintions and internal circuit	
	<p>H2ME</p> <p>Contact protection circuit</p> <p>Brown(+) ○ —</p> <p>Black OUT ○ —</p> <p>Blue(-) ○ —</p> <p>Main Circuit</p>

About mounting compatibility: Read auto switch ( RS- 6 ) and Solid state auto switch ( H2ME ) can use the same switch bracket.

## Oil pressure gauge

Model No.	2315-63-25B	GX - 0204	GX - 0308	GX - 1324	GX - 3544
Pressure range	0 to 25 MPa				
Indication	MPa	MPa and kN			
Accuracy	± 1.6 % or less of full scale				
Heat resistance temperature	- 5 to + 45 °C				
Glycerine filling	This pressure gauge is filled with pure glycerine.				
Temperature characteristic	Accuracy change of + 0.3 % for each + 10 °C rise based on + 20 °C, and - 0.3 % for every - 10 °C.				

## Solenoid valve

Starting current	0.056/0.044 A	0.034/0.026 A	0.042 A
Holding current	0.028/0.022 A	0.017/0.013 A	
Power consumption	1.8/1.4 W	2.1/1.6 W	1.2 W
Thermal class	B (Molded coil)		
Wiring method	DIN connector, with surge suppressor, lamp		

### Stop valve

#### PCM...V※ PCS...V※ PCH...V※

Valve specifications	
Fluid	Air
Operating pressure range	0.3 to 0.7 MPa
Ambient temperature	Ambient temp: -5 to 50°C, Fluid temp: 5 to 50°C
Action	Pilot operated
Port size	Rc 1/8
Effective sectional area	7 mm <sup>2</sup>
Lubrication	No required
Manual override	Non-locking type

Solenoid specifications			
Rated voltage	100 VAC (50/60 Hz)	200 VAC (50/60 Hz)	24 VDC
Starting current	0.056/0.044 A	0.028/0.022 A	0.075 A
Holding current	0.028/0.022 A	0.014/0.011 A	
Power consumption	1.8/1.5 W	1.8/1.5 W	2.0 W
Thermal class	B (Molded coil)		
Wiring method	DIN connector, with surge suppressor, lamp		

### Wiring

Improper connection of terminals can lead to problems such as the malfunctioning of solenoid valves. Carefully study the following diagram before connection.

Electric connection circuit diagram

Operating valve **PCMV※**

**PCSV※ PCHV※**

Stop valve **PCM...V※ PCS...V※ PCH...V※**

### Restriction of leakage current

When using a programmable controller, etc., the leakage current may affect the solenoid valve and the valve may not switch even if the solenoid valve is de-energized. Make sure that the leakage current is less than the valve shown in the table below.

AC100V	3.0 mA or less
AC200V	1.5 mA or less
DC24V	1.8 mA or less

## Precautions for safe handling

### 1

#### Installation direction

Install the Pneumatic Power Cylinder so that the piston rod faces downward. It can be installed upward or sideways, but the standard models cannot be used. Pneumatic Power Cylinder must be installed in the orientation shown in the illustration. so please contact us in advance. (Special model)

Installation method of air-hydro converter.

When installing the air-hydro converter away from the cylinder body, install on the equipment side using the mounting brackets of each type of air-hydro converter.

Connect the air-hydro converter and the body of the Pneumatic Power Cylinder with hydraulic piping of low pressure type.

In the case of upward PCH type, there is the type that an air release valve is attached in the width across flats of the piston rod. Perform the air release once every one or two months.

### 2

#### Checking the amount of hydraulic oil

There is an oil level tube on the side of the air-hydro converter. If an oil falls below the MIN level when the piston rod is pulled in and replenish the oil.

### 3

#### Using by punching

Since the Pneumatic Power Cylinder operates by air pressure, when the reaction force suddenly disappears during power stroke such as punching, the higher the load factor, the more rapidly the piston rod and ram operate after punching the work.

The cylinder may break.

Be sure to select a longer power stroke and install a shock absorbing stopper such as urethane rubber on the outside.

Examples: Deburring machine for castings, high load punching, destruction testing machine, etc.

### 4

#### The load of JIG, Mold are heavy

If the load of JIG, Mold, etc. is high with respect to the thrust when the cylinder backward, the operation of the cylinder will be affected, such as slowing down the backward speed or not returning. In that case, increasing the supply air pressure to the cylinder (P4 port) may increase the backward thrust and improve it.

In addition, by installing an air cylinder for auxiliary thrust when the cylinder backward, the backward thrust can be increased without changing the supply air pressure. (Refer right illustration)

#### PCH

#### PCS

#### PCM

Air-hydro converter should always be mounted with the P3 facing up, regardless of the mounting orientation of Pneumatic Power Cylinder.

## How to get the operation signal

**1**

Use the type with auto switch to switch the solenoid valve at each position.

**2**

Use a proximity sensor or limit switch.

**3**

By switching to high thrust stroke after the time up, the variation in work height is absorbed.

**4**

By monitoring the internal oil pressure, both the position and the oil pressure can be confirmed, which helps improve quality.

**5**

The actual thrust value is measured by using the load cell, and more precise quality control is performed.

## Mass

Model	Basic weight	Unit: kg	
		Total stroke Additional weight per each 10 mm of stroke	High thrust stroke Additional weight per each 1 mm of stroke
PCM	4.0	0.20	0.1
PCM-B			
PCMW	4.2	0.20	0.1
PCMW-B			
PCS-02	12.8	0.25	0.1
PCSW-02			
PCS-04	13.3	0.25	0.2
PCSW-04			
PCSV※-02	14.5	0.25	0.1
PCSV※W-02			
PCSV※-04	15.0	0.25	0.1
PCSV※W-04			

Model	Basic weight	Unit: kg	
		Total stroke Additional weight per each 10 mm of stroke	High thrust stroke Additional weight per each 1 mm of stroke
PCH-03	32	0.4	0.2
PCH-06	32	0.4	0.3
PCH-08	32	0.4	0.4
PCH-13	100	1.0	0.5
PCH-17	100	1.0	0.6
PCH-24	101	1.1	1.0
PCH-35	195	2.0	1.7
PCH-44	195	2.0	2.2

Example of weight for PCH-08-1010  
 $32 + 0.4 \times 100/10 + 0.4 \times 10 = 40 \text{ kg}$

## Applications

- Press fitting machine
- Rivet caulking
- Punching press
- Bending
- Work holding for leak tester
- Forming press
- Cutting
- Auto marking
- Thompson blade punching
- Crimping
- Caulking
- Work clamping
- Drawing press
- Compressive press
- Deburring
